Associate of Applied Science Degree (A.A.S.)

The WA State Dept. of Labor and Industries may recognize up to one year of training received as time toward the Limited Energy (06) Specialty Electrical License exam.

BE A PART OF A FIELD THAT CHANGES THE WAY WE LIVE AND WORK.

Technology has transformed how we communicate. Today, we read, watch TV, and access music using technology. It has transformed business too. While much of the work functions in the background, IT professionals are the backbone that keeps organizations operating.

Communication technicians design, implement, troubleshoot, and maintain the systems that help us communicate effectively. Information technology is a diverse field, with individuals working on network servers, telephone systems, wireless communication, and alarm systems.

TECHNOLOGY - THE GREAT ENGINE OF CHANGE.

Information technology is a field of constant change, but one that is essential to our success. IT professionals can be found working in every industry – from companies that specialize in information technology, to hospitals, schools, banks, and everywhere in between.

The way we meet people and share information is completely different than it was 50 years ago and it will continue to change. With society leaving paper behind for virtual communication, individuals who have the skills necessary to set up, troubleshoot, and keep secure the systems we have in place are expected to be in demand.
